

Audio-Animatronic (9/2/15) - Concept Design

*motion

Head:

- cylinder silver/metallic head
- neck is a screw with threads
 - head "screws" up and down *
- two bolts on side of face - like Frankenstein's monster

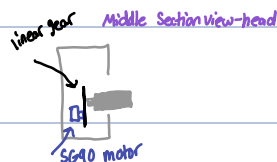

Eyes

- cyborg eyes → one red LED surrounded by gear decal → other eye "normal" human-like eye (pi-eye?)

Sunglasses

- red sunglasses on top of his head
- when animatronic starts dialogue - shades go up *
- when dialogue ends - shades down

Mouth

- rectangular with linear gear moving up and down *
- like a nutcracker/puppet

Torso

- shape:  *torso will rotate 180° *

adam lambert
JCS 😊

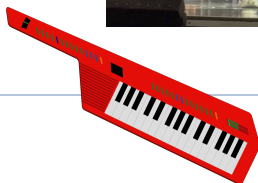

Outfit:

- suit vest - black with silver accents
 - *like attached picture without the sleeves
- pants - black with silver glitter

Keytar:

- animatronic will be playing a keytar
- red with rainbow glitter

Arms:

- arms are long enough to reach keytar
 - one holds it up, the other moves across the keys *
- arms are silver (same as body) with light gray gloves
 - *white gloves would clash with keytar
- animatronic can have 4-5 fingers

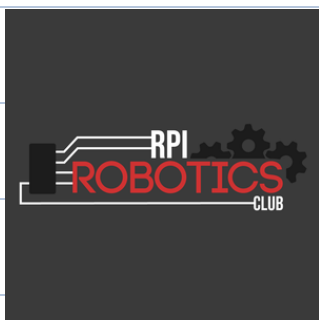

Legs:

- legs are a little longer than torso
 - has on the black with silver glitter pants
- bottom are high heel boots

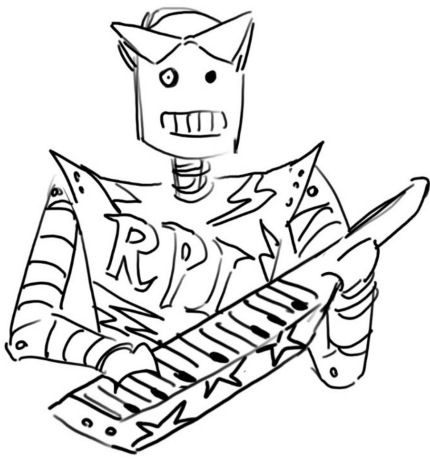

Color Scheme:

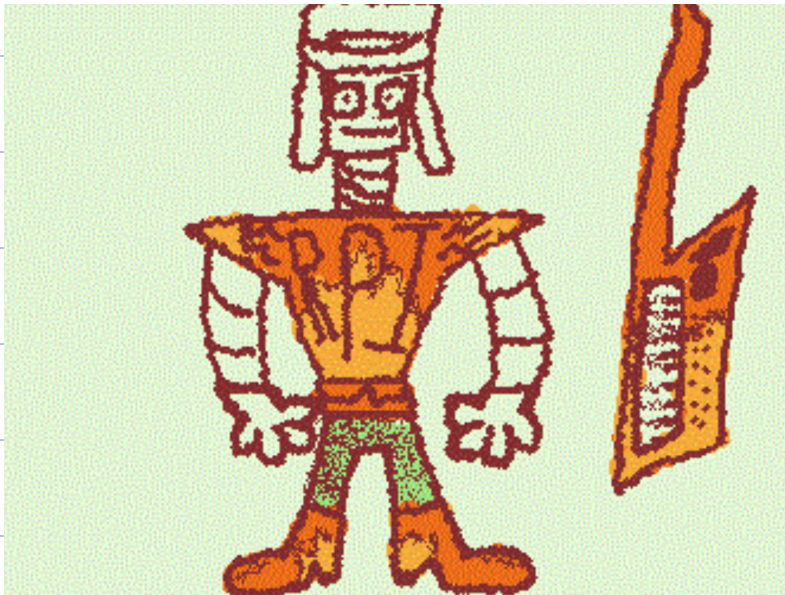

- red, silver, gray, white
 - try to keep some-what in line with RPI Robotics Club logo

Sketches at the end of 9/21/25 Meeting:
